

Tailor made support services to keep your research on track

Contract breeding cohort supply

Ensure planned, regular supply batches of models bred, pre-conditioned and delivered to your facilities.

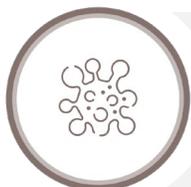

Genotyping, preconditioning, and aging

Leverage Inotiv's expertise in breeding to deliver pre-determined cohorts of known sex, confirmed phenotype or genotype models at the right age to suit your specific research needs

Surgical Services

Access to highly skilled surgical teams combined with expert solutions and a first in class surgical model tracking system.

Health status verification

Verify and maintain the health of your colonies with our in-house Full Spectrum health monitoring program. All our standard and contract bred models are guaranteed to be of specific pathogen free.

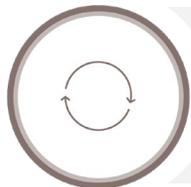

Custom model generation

Design and genetically engineer rodent models to meet your specific needs using CRISPR and ZFN technologies.

Cryopreservation

Ensure planned, regular supply batches of models bred, Reduce the risk of losing a valuable line forever through contamination or other catastrophes by using cryopreservation.

Rederivation and revitalization

Ensure planned, regular Bring cohorts back to their ideal state in the shortest time possible or completely refresh colonies from cryopreserved material

Quarantine

Ensure planned, regular supply batches of models bred, pre-conditioned and Prevent the risk of introducing pathogens to your facility by utilizing Inotiv's facilities to quarantine, test, revitalize or rederive the models you need from other facilities.
