

welfareplus[®] Rodent Enrichment Solutions

NESTING ENRICHMENT PRODUCT

Cocoon

Designed to promote innate nesting instincts among rodents.

PRODUCT DESCRIPTION

Cocoon nesting material is an innovative and natural solution designed to empower your laboratory animals, particularly rodents, to fulfill their innate nesting instincts. Crafted from pure cotton cellulose and whitened without chlorine, The safe, short fibers are tightly packed, encouraging rodents to rip, shred, and pull apart the material—just as they would in a natural habitat—to create a nest that is warm, soft, and perfect for adults and pups alike. This material effectively traps body heat, aiding in thermoregulation and providing a comfortable, secure environment.

PRODUCT FEATURES AND BENEFITS

- **Satisfies Natural Instincts:** Encourages foraging, carrying, and shredding, fulfilling rodents' innate drive to build nests.
- **Reduces Time Spent Portioning:** Pre-portioned design minimizes preparation time for researchers and technicians.
- **Limits Experiment Variability:** Consistent material and form factor help standardize nesting conditions across studies.
- **Prevents Monopolization:** The small, easily transportable units help ensure all animals can access and utilize nesting material, reducing dominance issues.
- **Safe, Short Fibers:** Made from pure cotton cellulose with short, safe fibers that are harmless for both adult rodents and pups.
- **Small, Cylindrical, and Lightweight:** Small, cylindrical and lightweight for animals that allows animals to easily transport it around their environment.
- **Suitable for mice, rats and small rodents.**

PACKAGING

Product is autoclavable. Certificates of analysis are available.

CODE	DESCRIPTION	QUANTITY
TE.5010C	Cocoon	50 buds/wheel x 120 wheels or 6000 buds/box
TE.5910C	Irradiated Cocoon	20 x 1000 wheels or 20,000 buds/box
