ABOUT

Dr. Georgette Hill joined Inotiv in 2022 when it acquired Integrated Laboratory Systems (ILS). She began working at ILS in 2006. Dr. Hill brings over 20 years of experience as a toxicologic pathologist and manager of pathology. As the Director, Histopathology Operations at the Research Triangle Park (RTP) Inotiv site, Dr. Hill supervises all pathologists, the Histology Manager, and the pathology support staff at Inotiv-RTP. She is responsible for managing both government and commercial pathology projects.

As a toxicologic pathologist, she has organized and coordinated close to thirty Pathology Working Groups (PWGs) in support of the Division of Translational Toxicology (DTT) (formerly the National Toxicology Program [NTP]) for chronic, subchronic, and immunotoxicity rodent studies. She has been the pathology data review, audit of pathology specimens, and quality assessment pathologist for various DTT studies and has collaborated with numerous investigators to provide histopathological evaluations for a variety of research studies.

Dr. Hill's general interests include rodent dermatopathology, upper respiratory pathology, and carcinogenesis.

Prior to joining Inotiv, Dr. Hill was a toxicologic pathologist/research fellow at the National Institute of Environmental Health Sciences (NIEHS) where she evaluated rodent chemical toxicity and carcinogenicity studies.

Dr. Hill received her D.V.M. from Tuskegee University School of Veterinary Medicine. She received her anatomic pathology residency training and Ph.D. in Comparative Biomedical Sciences from North Carolina State University College of Veterinary Medicine.
