

Kenichi (Ken) Sato

DVM, PhD, DJCVP

Senior Pathologist

kenichi.sato@inotiv.com

ABOUT

Dr. Ken Sato joined Inotiv in 2019 as a veterinary anatomic pathologist. He provides Inotiv with extensive experience in non-human primates and other major toxicology pathology methodologies. An important member of our preclinical study staff, he works both in discovery non-GLP development and GLP safety assessment. With this unique positioning, he prevents upstream pipeline issues before they become a problem in downstream processes.

Dr. Sato brings an impressive international resume to Inotiv. He gained his master's, then DVM, at Kagoshima University. He moved to the Dakutari Ogikubo Animal Hospital in Tokyo before quickly finding a position as an associate senior research pathologist at SNBL Ltd. in Japan. At this time, he also earned his Ph.D. simultaneously at Kagoshima University and received his diploma of JCVP. He would move to the Seattle branch of SNBL Ltd. spending most of the next 17 years as a research pathologist. He briefly had the same position at Altasciences Preclinical Seattle before joining Inotiv.

AREAS OF EXPERTISE

- Toxicologic pathology on NHPs
- DART Pathology

MY JAM

- Skiing
- Travel
